Dear Kickstarter Backer,

Thank you so much for your support of the GrovePi Zero Kickstarter! We have been working hard to get your backer rewards together, and are excited to deliver them to you on time!

As you probably know, you’ll need a Raspberry Pi Zero to bring your GrovePi Zero to life and start connecting it to sensors and monitoring the world around you. However, just a reminder that you can use the Raspberry Pi B+, 2 & 3 with the GrovePi Zero too in case you can’t get your hands on a Pi Zero!

Here are the items you’ll need:

- Raspberry Pi Zero (actually any Raspberry Pi will work)
- GPIO header pins (solder these on to your Raspberry Pi Zero to connect to the GrovePi Zero)
- Power Adapter (for the Raspberry Pi, which will also power the GrovePi Zero connected to it)
- Mini HDMI cable if you want to connect it to a monitor.
- microSD card with Raspbian for Robots or Cinch.

Please share your cool projects on our Forums (www.dexterindustries.com/forum), and reach out to us if you have any questions.

Thanks again for your support!

The Dexter Industries Team
